

D-shaped tokamak nonlinear feasibility pilot, t=150, low grid

D-shaped tokamak external VMEC, $N_x=N_y=32$, $N_z=24$, $t=150$
 claim: finite_low_grid_long_nonlinear_feasibility_not_yet_transport_validation
 samples: 61, $t=[0.05, 150]$
 final heat flux: 20.24
 final W_ϕ : 5.169
 least-trending window: [75, 150]
 window heat mean: 17.21
 window heat std: 1.953
 relative slope/time: 0.00147

Interpretation:
 finite long pilot; not promoted unless
 a saturated-window gate is defined and passed.
