

Quasilinear holdout gap report

External-VMEC excluded/near-miss gates

Claim boundary
No runtime/TOML absolute-flux predictor is promoted.

Model-selection passed: True
Accepted scoped candidate: spectral_envelope_ridge
Calibration report passed: False
Holdout mean/gate: 2.114 / 0.35

Next actual nonlinear holdout needed
new independent electrostatic-compatible nonlinear transport window with a passed grid/window convergence gate and split=holdout
Preferred family: itermodel_external_vmec

Nearest tracked gap
ITERModel external VMEC nonlinear t250 high-grid convergence
