

VMEC/Boozer multi-point aggregate-objective gate: passed

Per-sample scalar objective

Aggregate FD gate

status: passed
objective: quasilinear_flux
reduction: weighted_mean
samples: 4
base: 2.2271
central FD: -28797.5
response: 5.759e-03
curvature ratio: 1.667e-01

Finite-difference sensitivity through the in-memory VMEC/Boozer/SPECTRAX-GK value path. This is a multi-point reduced linear/QL objective gate, not a nonlinear turbulent transport optimization claim.
