

VMEC/Boozer multi-point aggregate-objective gate: passed

Per-sample scalar objective

Aggregate FD gate

status: passed
objective: quasilinear_flux
reduction: mean
samples: 2
base: 0.88704
central FD: 195473
response: 3.909e-02
curvature ratio: 9.456e-03

Finite-difference sensitivity through the in-memory VMEC/Boozer/SPECTRAX-GK value path. This is a multi-point reduced linear/QL objective gate, not a nonlinear turbulent transport optimization claim.
