

VMEC/Boozor aggregate surface-heldout gate: passed

Surface split objective

Held-out surface check

Claim boundary

```
status: passed
objective: quasilinear_flux
train s: [18]
holdout s: [19]
final delta: 1e-08
training passed: True
heldout passed: True
train rel.: 0.0013093413043194415
heldout rel.: 0.0004588662099816408
blockers: []
wall seconds: 28.64
```

The QH coefficient update is trained on one VMEC/Boozor radial surface_index and audited on a distinct held-out surface_index with the same alpha and ky samples. This is a reduced linear/quasilinear gate, not nonlinear transport.
