

# VMEC/Boozer aggregate-objective line-search gate: passed

## Line-search gate

status: passed  
objective: quasilinear\_flux  
reduction: mean  
samples: 2  
accepted: 1/1  
initial: 0.88704  
final: 0.885087  
rel. reduction: 0.00220170083056736  
stop: max\_steps

Every attempted update must pass the aggregate finite-difference curvature gate and decrease the multi-point reduced objective. This is optimizer control-flow evidence, not a nonlinear transport claim.
